

Programmable GT series

GT01

GT10

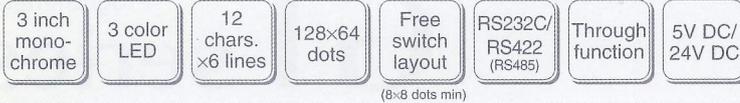

GT30

Wide in functionality.
Compact in size and price."

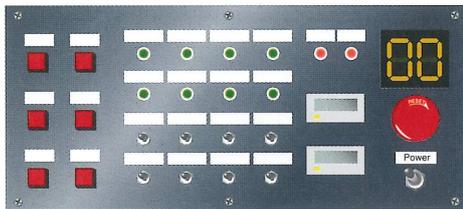

Ultra compact size with all the features required for control panels

Cost and space saving

- GT01 is a shortcut to cost reduction.

Eliminates the need for component arrangement, component inventory, and man-hours for wiring.

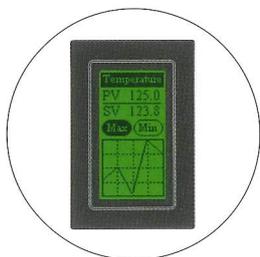

Improves the design and operability.

Easy to change the settings by model and user.

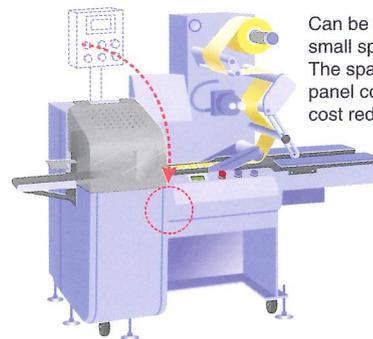

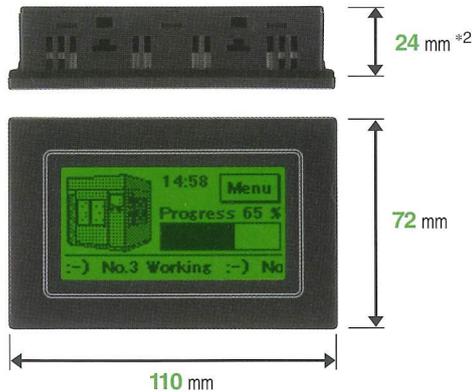

Total cost
1/5^{*1}

- Can be mounted in small spaces.

The ultra-thin body with a depth of only 24 mm^{*2} fits in any space.

Display in portrait orientation is also available.

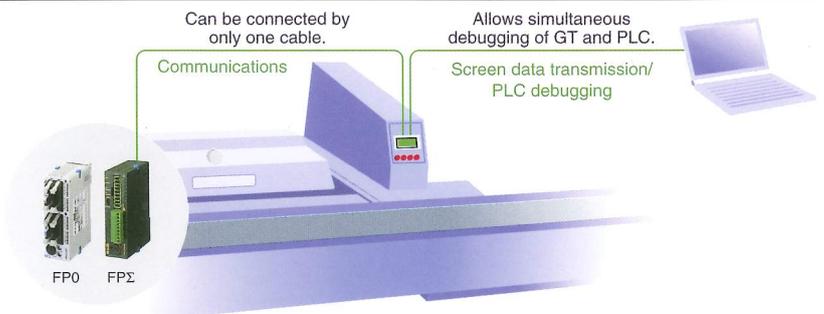

Can be mounted in any small space. The space saving control panel contributes to total cost reduction.

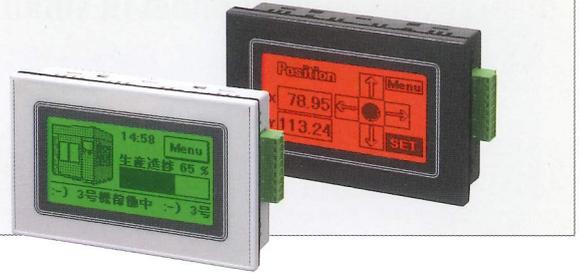

Simple connection and maintenance

- The Through function improves the convenience in combination with our FP series PLC.

Simultaneous operation of GT data transfer and PLC debugging will be available by connecting your GT to a personal computer and our FP series PLC.

- Only one cable is required to connect your GT directly to our FP series or Mitsubishi Electric FX series, substantially reducing the man-hours for wiring. (5 VDC type)
Only one cable is required because power is supplied through the TOOL port of the PLC.
- The use of high-brightness LEDs eliminated backlight replacement work.
- The device wiring function reduces your workload for creating PLC ladder diagrams.
This function writes values in the PLC or turns bits on/off according to the PLC status or the screen No.

High visibility and multiple functions

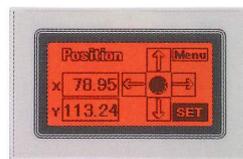

- Display of a highly visible equipment status achieved by the 3-color LEDs. The equipment appearance will be improved.

The bright and easy-to-read LCD indicates messages, graphics, switches, lamps, PLC data, graphs, clocks*3, and others in any layout you want. In addition, three backlight colors can be selected according to the equipment status. This allows you to identify the status at a glance.

70% brighter
(than our conventional model) *4

Normal (Green)

In operation (Orange)

Emergency (Red)

- Displays as small as three inches provide a wide variety of display functions that improve the workability for operators.

"TrueType fonts"

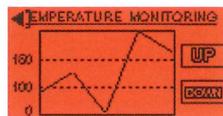

With the TrueType fonts, the screen can display up to 72 characters at a time (12 chars. x 6 lines) and therefore be used effectively.

"Analog-touch design"

You can freely position switches as small as 8 x 8 dots.

"Graph function"

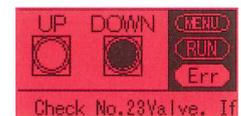

You can identify the production or operation status in line or bar graph form.

"Recipe function"

Settings by product item and other data (up to 3,600 words) can be transferred to PLC, reducing your workload for creating PLC ladder diagrams.

"Message scrolling function"

A scrolling message of up to 64 characters (two-byte) can be displayed at the bottom of the screen. (128 messages)

Usefulness

- Multiple languages can be used on a single GT unit.

One product model can support multiple languages for a wide variety of destination countries.

Available languages *5

- There are two types of power supplies (5 V DC/24 V DC) and two types of communication (RS232C/RS422). Connection with PLCs of a variety of manufacturers is possible. (Please refer to the compatible PLC list.)

*1: Compared with our products. Not guaranteed in all cases.

*2: When the panel thickness is 5 mm, the screw head of the mounting bracket protrudes 4 mm.

*3: Refers to and displays external clock data. (Not provided with a built-in clock function.)

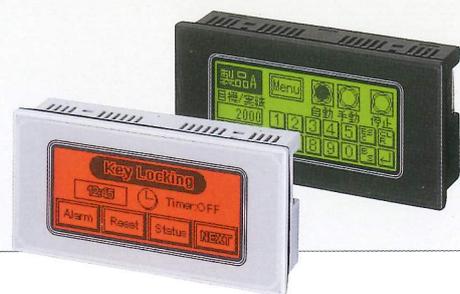

*4: Compared with GT10.

*5: If your operating system is Windows 2000 or XP, the above languages can be displayed on one screen at a time.

With other operating systems, the screen creation tool "Terminal GTWIN English Version" is required, and the operating system's language must be the one you want to display.

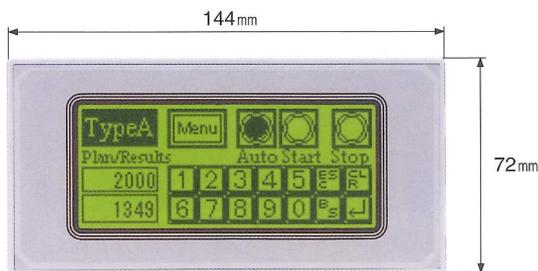

The 4-inch wide screen serves as a message display and control panel in small spaces.

- 4 inch mono-chrome
- 3 color LED
- 16 chars. x6 lines
- 160x64 dots
- Matrix switch 20x8
- RS232C
- Pass-through function
- 24V DC

The 4-inch wide screen serves as a display and control panel.

Small in size but features a high-resolution touch panel with 20 horizontal and 8 vertical segments, allowing you to freely position many switches. The screen is wide enough to use in split mode, which extends the variety of uses.

Displays up to 96 TrueType font characters.

Display of 10 x 10 dot characters was achieved by adopting TrueType fonts. This substantially increased the number of characters that can be displayed on the screen at a time to 6 lines at 16 characters per line. It also increased the flexibility in the size of parts, such as switches, allowing detailed screen display designs.

Ultra-thin body with a 32-mm depth

The panel depth is only 32 mm (including the mounting bracket). This ultra-thin body saves space for installation.

Supports either a portrait or landscape display.

The portrait or landscape display can be switched by a simple setting on GTWIN. This allows you to install the display unit in any place you want without affecting the target equipment design.

Excellent maintainability

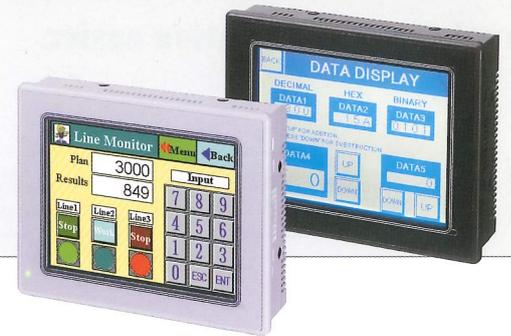

The backlight source is LEDs, which require no troublesome replacement work. In addition, battery replacement is not required because screen data is stored in flash ROM, and the other data is backed up* by a built-in secondary battery.

You can use it for a long time with minimum maintenance.
*10 days or more on a full charge. (Varies with your operation conditions.)

- Features a pass-through function useful for debugging (Refer to GT01.)
- Equipment status display by the 3-color LEDs (Refer to GT01.)
- Multilingual (Refer to GT01.)

The 5.7-inch STN color screen dresses up the control panel.

Medium Size Programmable Display **GT30**

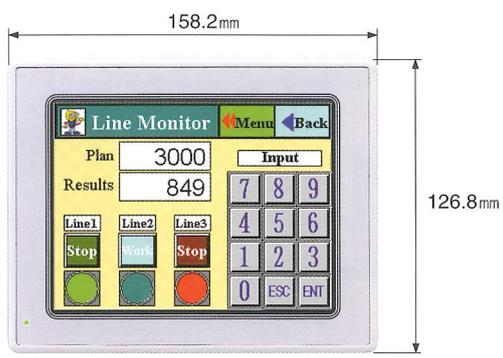

- 5.7 inch STN color/monochrome
- 16 colors (GT30C)
- White/Blue (GT30M)
- 32 chars. x24 lines
- 320x240 dots
- Matrix switch 16x12
- RS232C
- Pass-through function
- 24V DC

Bright and highly visible display

Both the 16-color type and the blue monochrome type provide top brightness in the mid-size range.

Beautiful TrueType font characters

With TrueType fonts, the screen displays beautiful characters. A wide range of character sizes can be selected from 10 x 10 dots to 64 x 64 dots, allowing flexible screen designs.

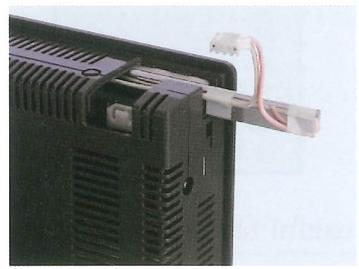

Compact body with a 41-mm depth and a narrow frame

The depth is only 41 mm. This thin body saves space for installation. The LCD frame is also narrow, contributing to the total size reduction of the body.

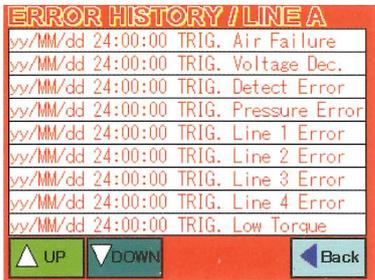

Long-life backlight

The backlight can last as long as 50,000 hours (at room temperature and humidity). You have almost no need to replace the backlight. Of course, the backlight can be replaced on site.

Alarm list for record management

Alarm activation, check, and recovery can be recorded and displayed.

Features a pass-through function useful for debugging (Refer to GT01.)

The device wiring function reduces your workload for creating PLC ladder diagrams.

Alarm activation, check, and recovery can be recorded and displayed.

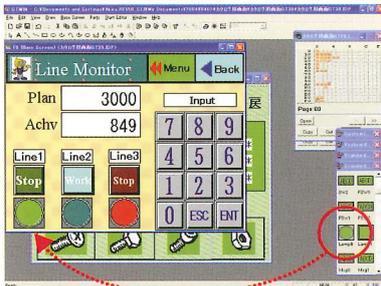

The user-friendly interface makes screen creation easier.

- WIN 95
- WIN 98/Me
- WIN 2000
- WIN NT
- WIN XP
- Required disk space 50 MB min

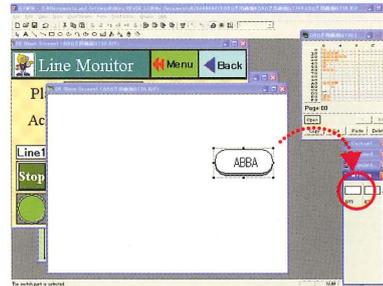

Simply drag and drop parts.

You can easily create screens by just dragging parts from the library and dropping them anywhere you want.

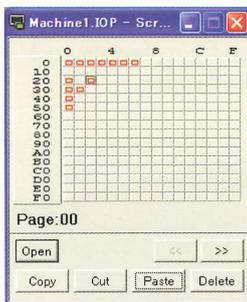

Just drag and drop your original parts to be registered.

You can also register your preset original parts easily by drag-and-drop operations.

Screen creation status at a glance.

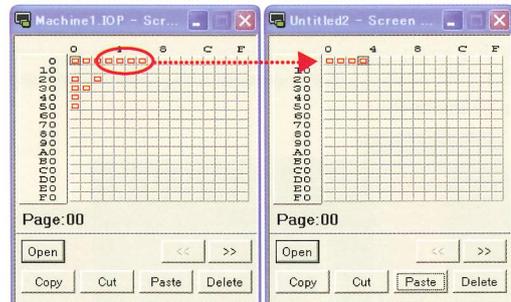

The screen manager function shows you the created screens and blank screens in an easy-to-check form. The screens can also be displayed by title.

Easy copying of screen data between files

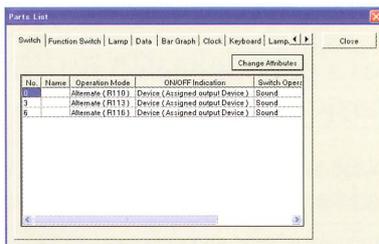

The screen manager function allows you to easily copy screen data from one file to another.

With this function, you can use your past work and share screen creation work with other operators.

What a useful function! - Batch parts editing

You can display an attribute list of parts placed on screens and directly modify them in the list.

Screen copy in bitmap form

You can output screen images in bitmap form and use them in off-the-shelf applications. This is useful for preparing equipment operation manuals.

Firmware upgrading function (GT01 only)

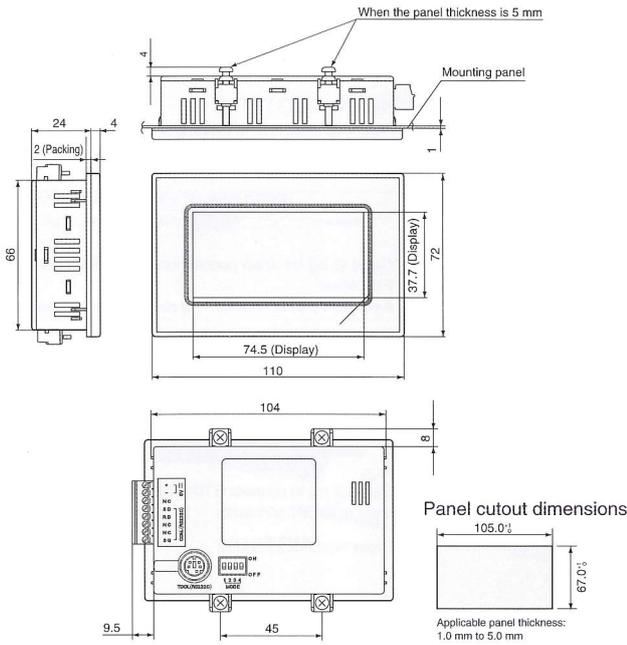

Before transferring screen data, tick "Automatic firmware update" to automatically upgrade the display if the display version is older than the firmware version in GTWIN.

You can keep the firmware version upgraded by using the latest version of GTWIN.

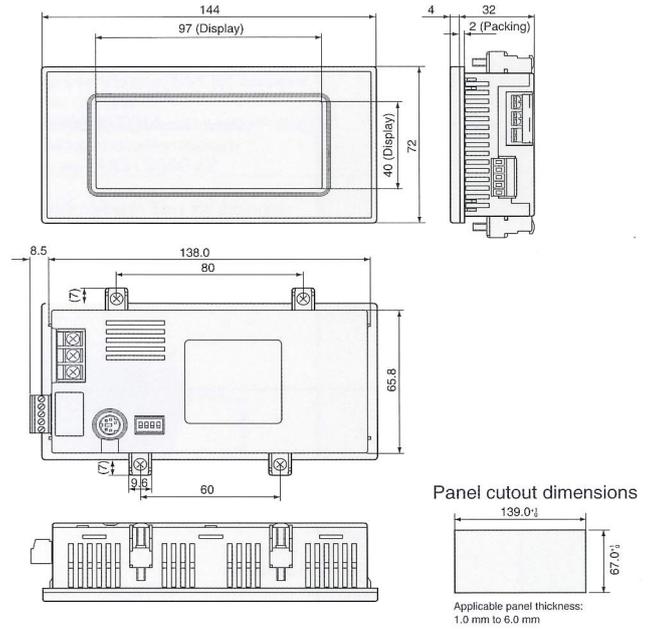

You can download a trial version of GTWIN Ver. 2 from the following Website. (Login as NAIS FAN members is required.)
http://www.nais-j.com/plc/uacs/plc_dl_soft.html

*1: The usable address range is that of FX2N.

*2: Notes for using the general-purpose serial communication mode of GT01

• GT01 control signals (RS, CS) are not available. Note the following points when you use Duplex 1 or Duplex 2.

• Commands transmitted from a microprocessor board during a GT01 data transmission cannot be accepted.

• When there is no response from GT, retry the command transmission.

Specifications and Product Types

Specifications

Item	GT01 specifications				GT10 specifications	GT30 specifications
