

EQ-20 SERIES

Adjustable Range & Fixed-focus Reflective Photoelectric Sensor **Amplifier Built-in**

Detects any color object at a certain distance

Conforming to EMC Directive

Not affected by object color or background

The sensor can detect objects at a consistent distance regardless of their color.

Moreover, it does not detect the background beyond the setting distance.

(However, when the background is specular, it may be necessary to change the angle of the sensor.)

EQ-23: Correlation between material (50 × 50 mm 1.969 × 1.969 in) and sensing range (typical)

These bars indicate the sensing range with the respective objects when the distance adjuster is set at the sensing range of 100 mm 3.937 in, 65 mm 2.559 in and 30 mm 1.181 in long, each, with white non-glossy paper.

Compact size

It saves you space. (Cable type: W12 × H31 × D20 mm W0.472 × H1.220 × D0.787 in)

Red LED Light Source

The sensor emits a visible red LED beam so that the alignment is simple.

Automatic interference prevention function

The **EQ-20** series is incorporated with an automatic interference prevention function so that two sets of sensors can be installed closely together or facing each other.

Plug-in connector type is available

Plug-in connector type, which can be easily disconnected for replacement, is available. In case a problem occurs, anyone can replace the sensor in a minute.

Waterproof

The sensor can be hosed down because of its IP67 construction and the non-corrosive stainless steel mounting bracket (optional). It can be safely used on a food processing line or an assembly line subject to water splashes.

Note: However, take care that if it is exposed to water splashes during operation, it may detect a water drop itself.

APPLICATIONS

Detecting diversely colored objects

Detecting baked rice crackers

Detecting plywood boards

ORDER GUIDE

Type	Appearance	Adjustable range (Note 1)	Model No.	Output
NPN output type		 20 to 40 mm 0.787 to 1.575 in	EQ-22	NPN open-collector transistor
		 30 to 100 mm 1.181 to 3.937 in	EQ-23	
		 30 to 200 mm 1.181 to 7.874 in	EQ-24	
PNP output type		 20 to 40 mm 0.787 to 1.575 in	EQ-22-PN	PNP open-collector transistor
		 30 to 100 mm 1.181 to 3.937 in	EQ-23-PN	
		 30 to 200 mm 1.181 to 7.874 in	EQ-24-PN	

NOTE: Mounting bracket is not supplied with the sensor. Please select from the range of optional sensor mounting brackets (two types).

Note 1: The adjustable range stands for the maximum sensing range which can be set with the adjuster.

The sensor can also detect an object less than 30 mm 1.181 in (EQ-22□: 20 mm 0.787 in) away.

5m 16.404 ft Cable length type, plug-in connector type

5 m 16.404 ft cable length type (standard:2 m 6.562 ft) and plug-in connector type (standard:cable type) are also available.

• Table of Model Nos.

Type	Standard	5 m 16.404 ft cable length type	Plug in connector type (Note 1)
NPN output	EQ-22	EQ-22-C5	EQ-22-J
	EQ-23	EQ-23-C5	EQ-23-J
	EQ-24	EQ-24-C5	EQ-24-J
PNP output	EQ-22-PN	_____	EQ-22-PN-J
	EQ-23-PN	_____	EQ-23-PN-J
	EQ-24-PN	_____	EQ-24-PN-J

Note: Please order the suitable mating cable separately.

• Mating cable

Type	Model No.	Description

EQ-20

OPTIONS

Designation	Model No.	Description	
Narrow-view slit mask (Note 1)	OS-EQ2-1	It makes the sensing view narrow (Slit size: $1.5 \times 18 \text{ mm}$ $0.059 \times 0.709 \text{ in}$)	
Sensor mounting bracket (Note 2)	MS-EQ2-1	Back angled mounting bracket	
	MS-EQ2-2	Foot angled mounting bracket	
Universal sensor mounting stand (Note 3)	MS-AJ1	Horizontal mounting type	Basic assembly
	MS-AJ2	Vertical mounting type	
	MS-AJ1-A	Horizontal mounting type	Lateral arm assembly
	MS-AJ2-A	Vertical mounting type	

Notes: 1) Applying the slit mask on **EQ-24** shortens the adjustable range to '30 to 160 mm 1.181 to 6.299 in'. It is not available for plug-in connector type.
 2) For the plug-in connector type, leave space under the sensor for plug-in connection with the mating cable.
 3) Refer to [p.332](#) for details of the universal sensor mounting stand.

Narrow-view slit mask

SPECIFICATIONS

Type		NPN output type			PNP output type		
Item	Model No.	EQ-22	EQ-23	EQ-24	EQ-22-PN	EQ-23-PN	EQ-24-PN
Adjustable range (Note 1)		20 to 40 mm 0.787 to 1.575 in	30 to 100 mm 1.181 to 3.937 in	30 to 200 mm 1.181 to 7.874 in	20 to 40 mm 0.787 to 1.575 in	30 to 100 mm 1.181 to 3.937 in	30 to 200 mm 1.181 to 7.874 in
Sensing range (with white non-glossy paper and at MAX. adjustment)		0 to 40 mm 0 to 1.575 in	0 to 100 mm 0 to 3.937 in	0 to 200 mm 0 to 7.874 in	0 to 40 mm 0 to 1.575 in	0 to 100 mm 0 to 3.937 in	0 to 200 mm 0 to 7.874 in
Hysteresis		5 % or less of operation distance		20 % or less of operation distance	5 % or less of operation distance		20 % or less of operation distance
Repeatability		Along sensing axis: 1 mm 0.039 in or less, Perpendicular to sensing axis: 0.2 mm 0.008 in or less (with white non-glossy paper)					
Supply voltage		12 to 24 V DC \pm 10 % Ripple P-P 10 % or less					
Current consumption		45 mA or less			50 mA or less		
Sensing output		NPN open-collector transistor <ul style="list-style-type: none">• Maximum sink current: 100 mA• Applied voltage: 30 V DC or less (between sensing output and 0 V)• Residual voltage: 1 V or less (at 100 mA sink current) 0.4 V or less (at 16 mA sink current)			PNP open-collector transistor <ul style="list-style-type: none">• Maximum source current: 100 mA• Applied voltage: 30 V DC or less (between sensing output and + V)• Residual voltage: 1 V or less (at 100 mA source current) 0.4 V or less (at 16 mA source current)		
		Utilization categoryDC-12 or DC-13					
		Output operationSwitchable either Detection-ON or Detection-OFF					
		Short-circuit protectionIncorporated					
Self-diagnosis output		NPN open-collector transistor <ul style="list-style-type: none">• Maximum sink current: 80 mA• Applied voltage: 30 V DC or less (between self-diagnosis output and 0 V)• Residual voltage: 1 V or less (at 80 mA sink current) 0.4 V or less (at 16 mA sink current)			PNP open-collector transistor <ul style="list-style-type: none">• Maximum source current: 80 mA• Applied voltage: 30 V DC or less (between self-diagnosis output and + V)• Residual voltage: 1 V or less (at 80 mA source current) 0.4 V or less (at 16 mA source current)		
		Output operationON under unstable sensing condition					
		Short-circuit protection					
Response time		1 ms or less					
Operation indicator		Red LED (lights up when the sensing output is ON)					
Stability indicator		Green LED (lights up under stable light received condition or stable dark condition) (Note 2)					
Distance adjuster		2-turn adjuster with indicator					
Automatic interference prevention function		Incorporated (Two units of sensors can be mounted close together.)					
Environmental resistance	Pollution degree		3 (Industrial environment)				
	Protection		IP67 (IEC)				
	Ambient temperature		− 20 to + 55 °C − 4 to + 131 °F (No dew condensation or icing allowed), Storage: − 25 to + 70 °C − 13 to + 158 °F				
	Ambient humidity		35 to 85 % RH, Storage: 35 to 85 % RH				
	Ambient illuminance		Sunlight: 10,000 ℓx at the light-receiving face, Incandescent light: 3,000 ℓx at the light-receiving face				
	EMC		EN 50081-2, EN 50082-2, EN 60947-5-2				
	Voltage withstandability		1,000 V AC for one min. between all supply terminals connected together and enclosure				
	Insulation resistance		20 MΩ, or more, with 250 V DC megger between all supply terminals connected together and enclosure				
	Vibration resistance		10 to 500 Hz frequency, 3 mm 0.118 in amplitude in X, Y and Z directions for two hours each				
Shock resistance		500 m/s ² acceleration (50 G approx.) in X, Y and Z directions for three times each					
Emitting element		Red LED (modulated)					
Material		Enclosure: PBT, Lens: Polycarbonate, Indicator cover: Polycarbonate					
Cable		0.2 mm ² 4-core oil, heat and cold resistant cabtyre cable, 2 m 6.562 ft long					
Cable extension		Extension up to total 100 m 328.084 ft is possible with 0.3 mm ² , or more, cable.					
Weight		50 g approx.					
Accessory		Adjusting screwdriver: 1 pc.					

Notes: 1) The adjustable range stands for the maximum sensing range which can be set with the adjuster.

The sensor can also detect an object less than 30 mm 1.181 in (EQ-22□: 20 mm 0.787 in) away.

2) Refer to 'PRECAUTIONS FOR PROPER USE' on p.253 for the operation details of the stability indicator.

SENSING CHARACTERISTICS (TYPICAL)

EQ-22

Sensing fields

- Setting distance: 20 mm 0.787 in • Setting distance: 40 mm 1.575 in • Setting distance: 40 mm 1.575 in with slit mask

Emitted beam

Correlation between color (50 X 50 mm 1.969 X 1.969 in non glossy paper) and sensing range

Correlation between material (50 X 50 mm 1.969 X 1.969 in) and sensing range

EQ-23

Sensing fields

- Setting distance: 65 mm 2.559 in • Setting distance: 100 mm 3.937 in • Setting distance: 100 mm 3.937 in with slit mask

Emitted beam

Correlation between color (50 X 50 mm 1.969 X 1.969 in non glossy paper) and sensing range

Correlation between material (50 X 50 mm 1.969 X 1.969 in) and sensing range

EQ-20

SENSING CHARACTERISTICS (TYPICAL)

EQ-24

Sensing fields

- Setting distance: 100 mm 3.937 in
- Setting distance: 200 mm 7.874 in
- With slit mask (adjuster at MAX.)

Emitted beam

Correlation between color (50 X 50 mm 1.969 X 1.969 in) and sensing range

These bars indicate the sensing range with the respective colors when the distance adjuster is set at the sensing range of 200 mm 7.874 in, 100 mm 3.937 in and 30 mm 1.181 in long, each, with white color. The sensing range varies depending also on material.

Correlation between material (50 X 50 mm 1.969 X 1.969 in) and sensing range

These bars indicate the sensing range with the respective objects when the distance adjuster is set at the sensing range of 200 mm 7.874 in, 100 mm 3.937 in and 30 mm 1.181 in long, each, with white non-glossy paper.

PRECAUTIONS FOR PROPER USE

Refer to p.1135~ for general precautions.

Mounting

- Tightening torque should be 0.5N·m or less.

- Care must be taken regarding the sensor mounting direction with respect to the object's direction of movement.

- When detecting a specular object (aluminum or copper foil) or an object having a glossy surface or coating, please take care that there are cases when the object may not be detected due to a small change in angle, wrinkles on the object surface, etc.
- When a specular body is present below the sensor, use the sensor by tilting it slightly upwards to avoid wrong operation.
- If a specular body is present in the background, wrong operation may be caused due to a small change in the angle of the background body. In that case, install the sensor at an inclination and confirm the operation with the actual sensing object.
- Please take care that the sensor will compulsorily go to the light received (ON) condition if excessive ambient light is received.
- Please note that when the distance adjuster is set to NEAR, a dead zone is present just in front of the sensing surface.

Stability indicator

- The EQ-20 series uses a PSD as its beam receiving device and detects the incident beam position rather than the light intensity. Hence, the output corresponds to the distance.

Further, the stability indicator indicates the margin in the incident light intensity. The distance at which it lights up / turns off differs depending on the reflectivity of the sensing object, as shown in the figure below, and is not related to the operation of the output. Do not use the sensor in the condition in which the stability indicator is off (unstable light received condition).

Self-diagnosis function

- The sensor diagnoses the incident light intensity, and if it is reduced due to dirt or dust, or beam misalignment, an output is generated.

- ① The self-diagnosis output transistor stays in the 'OFF' state during stable sensing.
- ② When the sensing output changes, if the incident light intensity does not reach the stable light received level or the stable dark level, the self-diagnosis output becomes ON. Further, the self-diagnosis output changes state when the sensing output changes from Light to Dark state. (The operation of the sensing output is not affected.)
- ③ In case of insufficient beam interruption, there will be a time lag before the self-diagnosis output turns ON.

Distance adjustment

<Adjusters>

<Adjusting procedure>

Step	Description	Distance adjuster
①	Turn the distance adjuster fully counterclockwise to the minimum sensing range position. (30 mm 1.181 in approx., EQ-22□: 20 mm 0.787 in) approx.	NEAR FAR
②	Place an object at the required distance from the sensor, turn the distance adjuster gradually clockwise, and find out point (A) where the sensor changes to the light received condition.	NEAR FAR
③	Remove the object, turn the distance adjuster further clockwise, and find out point (B) where the sensor changes to the light received condition again with only the background. (When the sensor does not go to the light received condition even if the adjuster is fully turned clockwise, point (B) is this extreme point.)	NEAR FAR
④	The optimum position to stably detect objects is the center point between (A) and (B).	NEAR FAR

Note: In order to protect itself, the distance adjuster idles if turned fully.

Wiring

- The self-diagnosis output does not incorporate a short-circuit protection circuit. Do not connect it directly to a power supply or a capacitive load.

Others

- Do not use during the initial transient time (50 ms) after the power supply is switched on.
- When connecting the mating cable to the plug-in connector type, the tightening torque should be 0.4 N·m or less.
