

Type 2

# Ultra-slim Safety Light Curtain

SF2C SERIES

The control category differs depending on the configuration and wiring of the external circuit.

# SF2C SERIES

Category 2 PLc SIL1

The control category differs depending on the configuration and wiring of the external circuit.

## Featuring easy beam axis alignment and reduced wiring

### Slim size for efficient applications

Available work space is expanded from the previous model, and productivity is improved.

### Simple safety distance calculations

Recalculation of the safety distance is unnecessary for each time safety light curtain length is changed.

Safety Distance SF2C-H□ : 128 mm 5.039 in  
(Calculation based on ISO 13855)

### Dramatically less wiring work with optical synchronization

Safety light curtain wiring consists of just five wires each for the emitter and receiver, allowing you to easily implement safety measures in about the same amount of time as with an area sensor with using optical synchronization.

#### Previous (Type4)

#### SF2C series (Type2)

Connection between the emitter and receiver is not required.  
Possible to use power supply each.

#### Functions with just six wires!

- Emitter: +V, 0 V
- Receiver: +V, 0 V, Control output, Lockout output

### Beam axis alignment made easy

The emitter has an effective aperture angle of  $\pm 5^\circ$  or less for an operating range of 3 m **9.843 ft**. Compared to Type 4 safety light curtains (which have an effective aperture angle of  $\pm 2.5^\circ$  or less), the **SF2C** series is easy to align and install.

### Easy installation

The standard mounting bracket is already mounted for easy installation.

### Can be used in a variety of applications for simplified equipment [Large multi-purpose indicator]

The bright LED indicators located in the center of both sides of each safety light curtain can be light on / blink in orange with external inputs. There is no need for setting up a separate indicator, so that equipment is consolidated.

#### Applications

### Light weight!

The **SF2C** series is made of resin that is lighter than the conventional aluminum case type\*.

Its lightweight body eases the burden on the mounting surface of the equipment and contributes to overall reduced weight during equipment transportation or overseas shipment.

\*Except the cable part

### Protection structure IP67

An IP67 (IEC) rating is achieved even in an ultra-slim resin body using a laser welding method.

### A fast response time for all models

**SF2C-H□**: 20 ms

The **SF2C** series reduces the safety distance as well as the calculation work required for the safety distance among models with different beam channels.

### Material suitable for manufacturing a secondary battery

**SF2C** body is made of resin and the mounting bracket is made of Stainless Steel (SUS), so materials used are limited. Suitable for manufacturing secondary batteries or for food production equipment.

## PRODUCT CONFIGURATION (RECOMMENDED)

### Cable type [Mounting bracket, with 3 m (9.843 ft) cable]

- Notes: 1) The **SF2C** series does not incorporate the external device monitoring function.  
 2) Requires a safety circuit architecture that complies with the desired control category implemented using either an **SF-C13** Control Unit, a safety relay (p.5), or other equipment.

### Spare parts (Accessories for safety light curtain)

Designation	Model No.	Description
Standard mounting bracket	<b>MS-SFC-1</b>	Allows the safety light curtain to be mounted at the rear with one M5 hexagon-socket-head bolt. Mounting direction of the bracket can be selected between vertical or horizontal (no dead zone). (4 pcs. per set for emitter and receiver) (Note)
Test rod $\phi 25$	<b>SF4C-TR25</b>	Min. sensing object for regular checking. ( $\phi 25$ mm $\phi 0.984$ in)

Note: The body of the safety light curtain is made of resin, so please take into account the expansion and contraction of the longitudinal dimension. When machining mounting holes, please check the actual product.

### 2 Control unit

Designation	Appearance	Model No.	Description
Slim type control unit		<b>SF-C13</b>	Use a discrete wire cable to connect to the safety light curtain. Relay output. Compatible with up to Control Category 2 when used together with <b>SF2C</b> series.

### Mounting brackets

Designation	Model No.	Description
<b>NA2-N</b> compatible mounting bracket	<b>MS-SFC-2</b>	Used when changing over area sensor <b>NA2-N</b> series to the <b>SF2C</b> series. The mounting holes of <b>NA2-N</b> series can continue to be used. Center mounting by a M6 hexagon-socket-head bolt is also possible. (4 pcs. per set for emitter and receiver) (Note)
Versatile bracket	<b>MS-SFC-3</b>	Two ways of mounting are possible. ① Rear mounting which enables beam adjustment ② Dead zoneless center mounting on aluminum frame (4 pcs. per set for emitter and receiver) (Note)
Intermediate supporting bracket for versatile bracket	<b>MS-SFC-4</b>	Used to support the safety light curtain in the middle. Be sure to purchase it when using <b>MS-SFC-3</b> on <b>SF2C-H28-P</b> , <b>SF2C-H28-N</b> , <b>SF2C-H32-P</b> , <b>SF2C-H32-N</b> . (2 pcs. per set for emitter and receiver) (Note)

Note: The body of the safety light curtain is made of resin, so please take into account the expansion and contraction of the longitudinal dimension. When machining mounting holes, please check the actual product.

A terminal block is required for wiring of safety light curtain side.

- Notes: 1) The left diagram is when using manual reset. If automatic reset is used, disconnect the lead from X2 and connect it to X3. In this case, a reset (RESET) button is not needed.  
2) Use a momentary-type switch as the reset (RESET) button.

#### NPN output type: Min. operation only

Connect the safety light curtain control output OSSD to S4 and make a short-circuit between S2 and S3.

- Notes: 1) The left diagram is when using manual reset. If automatic reset is used, disconnect the lead from X2 and connect it to X3. In this case, a reset (RESET) button is not needed.  
2) Use a momentary-type switch as the reset (RESET) button.

**PRECAUTIONS FOR PROPER USE**

Refer to the instruction manual for details.  
The instruction manual can be downloaded from our website.

- When this device is used in the “PSDI mode”, an appropriate control circuit must be configured between this device and the machinery. For details, be sure to refer to the standards or regulations applicable in each region or country.

- This catalog is a guide to select a suitable product. Be sure to read instruction manual prior to its use.
- Both emitter and receiver are adjusted before shipment, please apply both emitter and receiver with the same serial No. The serial No. is indicated on the plates of both emitter and receiver. (Indicated under model No.)

- Make sure to carry out the test run before regular operation.
- Do not install this device with a machine whose operation cannot be stopped immediately in the middle of an operation cycle by an emergency stop equipment.

**Part description and function**

<Indicator part>

**Emitter**

- Operation indicator [POWER]
- Test indicator [TEST]
- Frequency setting indicator [FREQ]
- Fault indicator [FAULT]

**Receiver**

- OSSD indicator [OSSD]
- Incident light intensity indicator [STB]
- Frequency setting indicator [FREQ]
- Fault indicator [FAULT]

**Common for emitter and receiver**

Description	Function
Large multi-purpose indicator (Orange)	Lights up when input for the large multi-purpose indicator is valid. Turns OFF when input for the large multi-purpose indicator is invalid.
Frequency setting indicator (Orange) [FREQ]	Turns OFF when Frequency 1 is set. Lights up when Frequency 2 is set.
Fault indicator (Yellow) [FAULT]	Turns OFF during normal operation. Lights up or blinks when fault occurs in the device.

**Emitter**

Description	Function
Operation indicator (Green) [POWER]	Lights up when device operation is as follows. Turns OFF when test input is valid.
Test indicator (Red) [TEST]	Lights up when test input is valid. Turns OFF when test input is invalid.

**Receiver**

Description	Function
OSSD indicator (Red / green) [OSSD]	When control output (OSSD) is OFF: lights up in red When control output (OSSD) is ON: lights up in green
Unstable light reception indicator (Orange) [STB]	Turns OFF when stable light is received (the percentage of light received is more than 150%). [Control output (OSSD) ON] Lights up when unstable light is received (the percentage of light received is between 100% and 150%). [Control output (OSSD) ON] Turns OFF when light is blocked (the percentage of light received is less than 100%). (Note 1) [Control output (OSSD) OFF]

Notes: 1) Besides, 'when light is blocked' refers to the status that there exists any object blocking light in the sensing area.

2) The description given in [ ] is marked on the device.

**Others**

- This device has been developed / produced for industrial use only.
- Do not use this device with mobile equipment such as an automated guided vehicle (AGV).
- Do not use during the initial transient time (2 sec.) after the power supply is switched on.
- Avoid dust, dirt and steam.
- Take care that the safety light curtain does not come in direct contact with water, oil, grease, or organic solvents, such as, thinner, etc.
- Take care that the safety light curtain is not directly exposed to fluorescent light from a rapid-starter lamp or a high frequency lighting device, as it may affect the sensing performance.
- The body of this device is made of resin, so please take into account the expansion and contraction of the longitudinal dimension. When machining mounting holes, please check the actual product.
